PROFESSIONAL SUMMARY

Senior Roblox systems developer with nearly 10 years of experience building gameplay systems, multiplayer mechanics, backend architecture, traversal systems, optimization pipelines, monetization systems, and scalable development workflows across studio prototypes and live Roblox experiences.

Experienced owning gameplay systems end-to-end, solving complex technical problems, improving unstable architectures, and rapidly prototyping production-ready gameplay systems inside collaborative development environments.

SPECIALIZATIONS

- Gameplay Systems
- Technical Prototyping
- Traversal Mechanics
- Server-Authoritative Systems
- Multiplayer & Networked Gameplay
- Backend Architecture
- Optimization & Debugging
- Mobile Gameplay Support
- Roblox Tooling & CI Pipelines

TECHNICAL STACK

Languages & Frameworks

- Lua / Luau

- TypeScript
- C++
- Rojo
- Wally
- Rokit
- Lune
- Knit
- React-Lua
- Fusion

Development & Workflow

- Git / GitHub
- CI & Build Automation
- Roblox Studio
- Trello
- ProfileService
- DataStore2
- Blender
- Selene
- StyLua

PROFESSIONAL EXPERIENCE

BLOCK MODELS LLC

Gameplay & Systems Developer | February 2026 to Present

Gameplay Prototyping & Systems

- Served as sole developer on the Looters gameplay prototype, owning gameplay systems, architecture, iteration, and implementation end-to-end
- Delivered a playable prototype in 3 days, a functional MVP in 7 days, and a polished gameplay pass 5 days later
- Built reusable modular gameplay systems including carry systems, interaction prompts, and HUD framework architecture
- Developed a cinematic first-person controller featuring sprint/stamina pacing and blink-pressure gameplay systems
- Designed and implemented server-authoritative interaction systems with mass-based object handling, drag mechanics, release safety systems, and interaction registration pipelines
- Built networked torso-look replication systems and responsive gameplay feedback systems
- Built a cart-pushing system with tuned responsiveness and orientation-aware interaction handling

Traversal & Gameplay Feel

- Reworked movement systems around vault-based traversal mechanics with animation blending, vault targeting, and IK suppression handling
- Built gameplay systems with strong emphasis on player feel, responsiveness, polish, and smooth gameplay flow

Technical Effects & Atmosphere

- Built a configurable “Horror Director” runtime system controlling pulse events, flicker timing, atmosphere pacing, and gameplay tension systems
- Developed a realistic runtime flashlight system with adaptive beam behavior, jitter simulation, lag tuning, and textured surface-impact effects

Mobile Gameplay Support

- Delivered full mobile gameplay parity across gameplay systems including carry interactions, touch prompts, jump handling, rotation controls, and persistent mobile UI recovery systems

Development Pipeline & Architecture

- Set up and standardized a complete Roblox development pipeline using Rojo, Wally, Rokit, Lune, Selene, and StyLua
- Built CI/build automation workflows including repeatable builds and sourcemap generation
- Structured scalable client/server/shared-module architecture supporting maintainable long-term workflows and clean repository organization

Disaster Games Contributions

- Contributed to monetization UI implementation supporting the game’s in-game store launch
- Identified onboarding gaps and independently designed and implemented FTUX tutorial systems for new-player guidance

FREELANCE ROBLOX DEVELOPER

2018 to Present

- Developed gameplay systems, backend architecture, combat systems, monetization systems, UI systems, and optimization pipelines across Roblox projects and studio environments
- Built reusable frameworks, backend modules, animation controllers, and scalable state handling systems
- Diagnosed and resolved memory leaks, replication issues, performance bottlenecks, gameplay instability, and backend architecture problems

- Developed anti-cheat systems focused on client-side exploit prevention and gameplay integrity
- Collaborated with programmers, builders, modelers, and production teams inside sprint-based workflows and organized development pipelines
- Led development efforts, reviewed code, improved technical organization, and helped stabilize projects under active production
- Frequently handled urgent technical systems and production-critical debugging responsibilities

SELECTED PROJECT EXPERIENCE

Titan Arrival

Creator & Lead Developer

- Built the entire project from the ground up including gameplay systems, backend architecture, combat systems, monetization systems, UI frameworks, optimization systems, and gameplay mechanics
- Rebuilt fragmented systems and stabilized project architecture across large interconnected gameplay modules
- Focused heavily on optimization, scalable architecture, gameplay responsiveness, and long-term maintainability

Attack on Titan Physics Project

- Developed a fully physics-based omni-directional movement system inspired by Attack on Titan
- Programmed custom movement physics and synchronization systems while maintaining smooth gameplay responsiveness and stable player control

Animation Contributions

Contributed animation work to high-traffic Roblox experiences including:

- Doodle World, 131M+ visits
- Boku No Roblox Remastered, 346M+ visits
- Anime Fighting Simulator, 2B+ visits
- Elemental Battlegrounds
- Super Power Training Simulator

CORE STRENGTHS

- Rapid Prototyping
- Gameplay Systems
- Backend Systems
- Optimization
- Problem Solving

- Multiplayer Systems
- Framework Architecture
- Technical Debugging
- Production Workflows
- Gameplay Polish

ADDITIONAL INFORMATION

- Self-taught Roblox developer with nearly 10 years of hands-on development experience
- Experienced across freelance, contract, and studio development environments
- Comfortable adapting to different technical stacks, workflows, and production pipelines
- Strong collaborator with experience working across gameplay, frontend, backend, and technical systems development
